

SOC 5050: Week 15 Commands Quick Reference

Christopher Prener, Ph.D.

November 28th, 2016

General Note

All of these commands must be run *after* the regression model you wish to test assumptions for. They will reflect the last model in Stata's memory.

Post-Estimation Commands

General Command

estat *output*

Eta-Squared Effect Sizes

estat *esize*

Akaike's and Bayesian Information Criterion

estat *ic*

Breusch-Pagan Test

estat *hettest*

White's Test

estat *imtest, white*

Variance Inflation Factor

estat *vif*

Storing Predicted Values

General Command

`predict varName [if , val]`

Predicted Value (\hat{y})

`predict yhat`

Residual Value

`predict varName, residual`

Standardized Residuals

`predict varName, rstandard`

Leverage

`predict varName, leverage`

Estimating Difference in Beta

`dfbeta`

Document Details

Document produced by [Christopher Prener, Ph.D.](#) for the Saint Louis University course SOC 5050 - QUANTITATIVE ANALYSIS: APPLIED INFERENTIAL STATISTICS. See the [course wiki](#) and the repository [README.md](#) file for additional details.
